- 2. Maintenance Items in Minitab Connect 7.5 1
- 3. Problems Resolved in Minitab Connect 7.5 1

1. New Features in Minitab Connect 7.5

- Slicer Enhancements - Can add preset values for slicers that the dashboard uses as the default values for each new session. Previously, the slicer would revert back to the entire range of possible data values for each new session.
- Control Chart Stages - Gives you the ability to add stages. Stages show how a process changes over specific periods of time.
- I Chart - New control chart that lets you monitor the mean of your process when you have continuous data that are individual observations that are not in subgroups.
- Laney P Chart - New control chart that lets you monitor the proportion of defective items that are produced by your process and to adjust for overdispersion or underdispersion in your data.
- Home Screen Updates - Removed the Connections panel from the home screen.
- Disable Failing Flows - Connect disables flows due to 5 successive failures and alerts the owner of the flow.

2. Maintenance Items in Minitab Connect 7.5

Improve support for non-ASCII characters in identifiers and filenames.

3. Problems Resolved in Minitab Connect 7.5

- Table header cannot reset properly in Prep (184547)
- Prep view rounds down large numbers (184576)
- Prep occasionally displays Find and Replace Modal instead of Prepare (184931)
- Cannot remove fields if Table is used in From Table Dropdown (186506)
- Default view overwrites link to filtered table (186509)
- Base View Custom SQL Field and Action Data Process throws error (186549)

- SharePoint Connector not parsing files with Chinese/Korean Characters in the file name (186545)
- When renaming a dashboard page, the delete key deletes the page rather than the page name text (186431)
- Cannot open existing or create new dashboards after system restart (186547)
- Not able to select both reference lines with duplicated names when creating an alert on a chart (186554)
- Error saving a View with special characters (165149)
- Select Rows menu appears out of place when Notes panel is open (165802)
- Incorrect view SQL when 'Find and Replace' more than one system fields (166891)
- Adding an unsaved item to a collection claims success, but fails (169710)
- Save External>Copy View: Data View not displayed correctly (207179)
- Edit as Text results in an error if View contains a Mashup/SQL field (214008)
- Cannot Copy Records if any fields are hidden in the View (214506)
- Show Totals row sits on top of Prep dropdown menu (215590)
- [message] appears in error notification on Notes (218558)
- Table Save External: Type is marked as required, but not enforced View freezes when saving (219574)
- Filtering using the Regex conditions does not work for Conditional Formats (220179)
- Cannot expand a column with certain inputs (221269)
- Error when adding a default value to a Link field (221328)
- Error occurs for a flow that triggers itself (221760)
- Adding a certain value in the name from Base tool causes an error (221882)
- Cannot export to Minitab if field with a long name is used for sorting (222354)
- Right-clicking on 'Home' or 'Window Switcher' from the navigation menu results in an error (223012)
- Rounding issue with large decimal places (223468)
- Nav menu errors when adding some unsaved items to a Collection (223786)
- Copy a field that has a long name, the original field is removed (224741)
- Forms can display overlapping validation text, obscuring fields (225389)
- Error in Notification Settings modal (225588)
- Notifications settings does not save (226740)
- Error occurs for a data process that triggers itself (227157)
- Analysis Warning message disappears when Auto-Update is enabled (200383)
- Characters in Reference Line can break control chart (212605)
- Capa Asset: one extra tab on topline section with black borders (221247)
- LA warning link does not stay on asset card (221340)
- Reference line label does not handle some characters properly (221422)
- Unintended borders become visible around graph when tabbing on asset (221622)
- NNCAPA: Opening and auto-updating large dashboard times have significantly increased (222057)
- Dashboard does not react gracefully if page/slicer is deleted between refreshes for the Monitor User (224127)

- Alpha value on RGBA scale for reference line is set and cannot be edited (224236)
- Dashboard assets continually load and errors are thrown when control chart is sent into error state (225707)
- Form Data Sources Link leads to spinning page (227691)
- Large number ranges do not always slice correctly in Preview (196616)
- "Missing" can appear twice in the Category Slicers categories list (196620)
- Custom date range start and end date does not reset to upper/lower date values if you've gone into Focus Mode (197425)
- Number range slicers will filter out missing values whenever min = max (201474)
- Filtered output is not always retained when switching pages with auto-update on (203294)
- Number range slicer cannot be edited when the variable contains only missing values (208389)
- Categorical levels that include backticks do not filter table asset (209788)
- Adding a plus sign in front of an exponential number causes the slicer to reset to 0 (210401)
- Custom date range start and end dates revert to default values in the dialog after switching pages and leaving focus mode (211510)
- Using arrow keys in number range slicer min/max input boxes inconsistently updates the number range (211715)
- Interacting with the number range slicer after the data type switches to text causes the table to display no records (212457)
- Number range slicer does not fix itself after removing and replacing data in the data view (212491)
- Text with certain characters cannot be used as a category for category slicers (213290)
- System Created/Updated fields used in category slicers do not slice table if format is non-formatted text in Table-Prep view (213326)
- Users can get stuck in focus mode if all data gets filtered out while auto-updating (216404)
- Slicers should revert to their default state on dashboard auto-update if the data view has been deleted (216574)
- Visualizations double render when auto-updating in Preview and Published mode while using Safari (221038)
- Users cannot open the date slicer dropdown using a keyboard (221277)
- Saved dashboard with date slicer filters out all data after the date column is changed to text (221463)
- Changing the data type of variable used by a category slicer deselects options in the dropdown menu (222271)
- Category slicer filters out all data on graphs if a number field is used and formatted as text in Table-Prep (223378)
- Number range slicers are occasionally being reset after a refresh for Monitor User (223991)
- Date Slicer does not update the data with relative date options when the date rolls over (224124)
